### DACKOR

is a privately held corporation specializing in 2D and 3D Laminates. Dackor functions as an interior decor creator by working closely with national retailers, furniture manufacturers, and architects. Together, designs are created for specific projects, or for standard line collections. You can find our material in almost every town in the US and Canada.

Aside from creating interior decors and coming up with new trends, Dackor also functions by maintaining one of the largest inventories of laminates; however, we also are equipped to offer custom colors with low minimums to give you the right color or print for your specific needs.

The majority of Dackor laminates are also created in conjunction with partners such as paper producers, board manufacturers, HPL laminate manufactures and edgebanding manufacturers. To create value engineered final products, Dackor laminates work side by side with these complimentary materials in fabricating finished casework and products.

Whether you are a developer, architect, kitchen cabinet manufacturer, refacer, or a producer of doors and components, your project is important to us.

Where Designs Form,

TEAM DACKOR

### What are 3D Laminates?

Dackor 3D Laminates offer capabilities that are impossible to achieve by standard High Pressure Laminates (HPL) such as forming 3D on all sides, crevices, grooves, and profiles of a component that have been routered into a MDF panel; thus, offering a seamless and solid appearance. Dackor 3D Laminates are ideal in environments demanding a surface that will not chip, crack, or delaminate. Additionally, 3D Laminates offer a level of wear and impact resistance that is unmatched by standard HPL.

### No Seams on the Front Edge

and the possibility for integrating seamless finger pulls into the surface mean that Dackor 3D Laminates are well-suited for environments requiring superior cleanability to prevent the collection of bacteria and mold such as in medical environments. Furthermore, your fixtures become less susceptible to delamination occurring from the occasional brush up or water spills, which can seep into the front edge seam and cause swelling in your substrate. With HPL, the exposed seam at the front edge is a typical starting point of delamination failure; however, this seam is non-existent with a 3D Laminate component.

### Superior Impact Resistance

means that your cabinets can be exposed to higher abuse before they must be considered for replacement. The amount of impact that would chip, crack, and expose the substrate of a High Pressure Laminate would simply cause a dent in a 3D Laminate. Dackor 3D Laminates can create the look you want, with an outstanding product, at an identical or lower price point than HPL.

	Wear Resistance	Impact Resistance
High Pressure Laminate (HPL)	>350+ Revolutions	>20N
Dackor 3D Laminates 0.3mm	>650+ Revolutions	>30N

### Services

### Roll Lengths & Widths

While most of our colors are 0.3mm in thickness (12 mil), we do stock a range of thicknesses ranging from 10 mil to 20 mil. Custom productions can be discussed for specific widths that are needed.

A standard roll length is 219 linear yards with a roll width (usable width) of 56-57 inches.

We offer a small roll (no minimum) cut to length service for all of our stock designs. Furthermore, we have the capability to slit rolls to custom widths. We also offer same day shipping for all orders placed before 12 noon eastern.

### Color Match & Minimums

Don't see what you need in our stock collection? Need an exact match? We can match most patterns and virtually all colors with a custom production. Contact us 4 months prior to the start of the project so we can ensure enough time for lab sample approval, production, and shipment of material.

Dackor offers the lowest minimum order quantities in the business at 600 yards (compared to 1500 and 3000 yards). What's better? We actually produce 2000 yards at our risk so that you can readily reorder when needed.

### Peel & Stick

Dackor 3D Laminates are available with a pre-applied adhesive backer. Our Peel and Stick is perfect for those who want to use our product on flat surfaces with minimal tools and materials required. Also, our Peel and Stick can be used for many applications including cabinet refacing and wall panels. The high-tack adhesive backer can adhere to most flat surfaces, and all you need is a knife and a straight edge to trim.

### Phenolic-Backed Sheets

Our designs are also available with phenolic-backed sheets. This product provides an exact match to your thermofoil components because it is the same material, essentially eliminating the need to purchase HPL from another supplier and having to worry about obtaining the best possible match.
